Benchmark Maintenance Services Machinery Installation Training:

John Lambert has been assisting Dofasco Steel with machine alignment practices since March 2002. Since that time John has trained Trades people and Millwright apprentices.

All feedback we have received has been very positive and John, very well received. John brings very strong background knowledge to this field and all trades personnel have expressed their approval of John's method of theory and hands on learning.

I would strongly recommend this training for Trades people and apprentice who are responsible for the installation and maintenance of rotating equipment.

We hope to have John train our future and existing trades people as part of our future involvement with our Predictive and Preventative maintenance vision.

Sincerely
Mike Dickson
Training Co-coordinator
Dofasco Steel Hamilton Ontario
